WPI; 2003-801147/75. P-PSDB; ADC65497 New PRO nucleic acid, useful for manufacturing a medicament for diagnosing or treating tumor.

Claim 2; Fig 375; 637pp; English.

Transmembrane polypeptides on antibody which specifically binds to a PRO invention also relates to a natibody which specifically binds to a PRO polypeptides are transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour in an amamal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The proliferation or differentiation of chondrocyte cells and amethod for colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as this enset in preparing PRO polypeptides by recombinant techniques and in actionate the proparing propagation of preparing PRO polypeptides by recombinant techniques and in section propagation of companies. The PRO polypeptides or antibodies are used in preparing a condition responsive to the polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of orgene expression in periovy ecells, for stimulating differentiation of adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating the upcake of glucose or FRA by skeletal muscle cells or adipocyte cells, for stimulating che proliferation of orgene expression in periovyte cells, for stimulating che proliferation of orgene expression in periovyte cells, for stimulating che proliferation of subspecies such as sports injuries and arthritis. FRO polypeptides such as such as sports injuries and arthritis and conditions which arthritis and conditions which man associated disorders such as various thalassamias and conditions which man esquence represents a human PRO polyment is also available in electronic format form forward and provide and also available in electronic format form the proliferation of organications are also useful for trat invention relates to isolated human PRO polypeptides (secreted and from USPTO at segdata.uspto.gov/sequence.html.

in the formation, differentiation and maintenance of multicallular roles in the formation, differentiation and maintenance of multicallular corganisms. The face of many individual cells (creatable proliferation, migration or differentiation) is typically governed by information is received from other cells and the immediate environment. The information is often transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cytotoxic factors, differentiation factors, neuropeptides and hormones) which are received and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins and receptors or membrane bound proteins. These membrane bound proteins and receptors or membrane bound interpreted by diverse cell receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention provides the amino acid sequences of novel human membrane bound receptors and proteins of the invention may have cytostatic activities through the stimulation of chondrocytes. The nucleic acids of the invention may be useful for the manufacture of a medicament for diagnosing or treating or temporation in a mammal. In addition, they may be useful for measuring or detecting the expression of a tumour associated gene. The present

in the formation, differentiation and maintenance of multicellular corganisms. The fate of many individual cells (for example proliferation, or organisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information, is often transmitted by secreted by peptides (for example mitogenic factors, auryival factors, cytotoxic factors, differentiation factors, cytotoxic factors, differentiation factors, neuropeptides and hormones) which are received and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins and receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention proteins, along with the cDNA sequences encoding them. The novel proteins of the invention may have cytostatic activities through the useful for the manufacture of a medicament for diagnosing or treating a tumour in a mammal. In addition, they may be useful for measuring or

useful for preparing a recombinant PRO polypeptide a medicament for diagnosing or treating tumor. New PRO nucleic acid, and for manufacturing

Claim 2; SEQ ID NO 375; 637pp; English

This invention relates to novel nucleic acids encoding human PRO secreted and transmembrane proceins. Extracellular proteins play important roles in the formation, differentiation and maintenance of multicallular organisms. The face of many individual cells (for example proliferation, migration or differentiation) is typically governed by information received from other cells and the immediate environment. The information is often transmitted by secreted polypeptides (for example mitogranic factors, survival factors, cytotoxic factors, differentiation factors, neuropeptides and hormones) which are received and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins and receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention provides the amino acid sequences of novel human membrane bound receptors and proteins of the invention may have cytostatic activities through the crimulation of chondrocytes. The nucleic acids of the invention may be useful for the manufacture of a medicament for diagnosing or treating a temmoral in addition, they may be useful for measuring or detecting the expression of a tumour associated gene. The present invention

Extracellular proteins play important roles in the formation, differentiation and maintenance of multicellular organisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information received from other cells and the immediate environment. The information is often transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cytocoxic factors, differentiation factors, neuropeptides and hormones) which are received and interpreted by diverse

            and receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention provides the amino acid sequences of novel human membrane bound receptors and proteins, along with the CDNA sequences encoding them. The novel proteins of the invention may have cytostatic activities through the stimulation of chondrocytes. The mucleic acids of the invention may be useful for the manufacture of a medicament for diagnosing or treating at detecting the expression of a tumour associated gene. The present sequence is a CDNA sequence which encodes a human FRO protein of the
                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          480

This invention relates to novel nucleic acids encoding human PRO secreted and transmembrane proteins. Extracellular proteins play important roles in the formation, differentiation and maintenance of multicellular corganisms. The fate of many individual cells (for example proliferation, organisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information.

Corganisms. The fate of process of the individual cells (for example proliferation, received from other cells and the immediate environment. The information is often transmitted by secreted bolypeptides (for example mitogenic factors, survival factors, cytotoxic factors, differentiation factors, concrepetides and hormones) which are received and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins and receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention provides the amino acid sequences of novel human membrane bound receptors and proteins of the invention may have cytostatic activities through the stimulation of chondrocytes. The nucleic acids of the invention may be useful for the manufacture of a medicament for diagnosing or treating a tumning the expression of a tumnor associated gene. The present considerating the expression of a tumnor associated gene. The present considerating the expression of a tumnor associated gene. The present consideration of the condition of a tumnor associated gene. The present consideration of the considerating and the condition of a tumnor associated gene. The present considerating the expression of a tumnor associated gene. The present consideration of the condition of a tumnor associated gene. The present considerating the result of the condition of the condition of a tumnor and a tum 120 120 121 AAGAAAAAATCATGAAAACCATCCAGCCAAAATGCACAATTCTATCTTGGGGAAT 180 9 09 3 receptor-ligand interaction; cytostatic; chondrocyte; tumour; ss; gene 1 GITGIGICCTICAGCAAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGAGCAACAC 1 GITGIGTCCTTCAGCAAAACAGIGGATTTAAATCTCCCTTGCACAAGCTTGAGAGCAACAC Gao Isolated nucleic acid for use in industrial applications has at leas percent nucleic acid sequence identity to nucleotide sequence that encodes amino acid sequence selected from amino acid sequence group. ```

Transmenbrane polypeptides on antibody which specifically binds to a PRO polypeptide, a machod for similating the release of tumour necrosis factor-alpha, from human blood, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for proliferation or differentiation of chondrocyte cells and a method for colon, breast, prostate, rectal, kidney, cervical and liver tumous). The proliferation probes, in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polynucleotides may also be used in preparing PRO polypeptides by recombinate techniques and in generating either transgenic animals or knock-out animals which are consistent and screening of therapeutically useful reagents. The PRO polypeptides by recombinate techniques and in medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of the stimulating discondition responsive to the polypeptides or antibodies, such as tumours, for stimulating the uptake of stimulating proliferation of or stimulating the proliferation of or gene expression in pericyte cells, for stimulating proliferation of or gene expression in pericyte cells, for stimulating proliferation of continued as sports injuries or traking various bone and/or cartilage disorders such as sports injuries and arthritis. PRO polypeptides which stimulate the release of for problems, articular cartilage defects, osteoarthritis and rheumatoid continued and arthritis proliferation of or gene expression of continued should be and of continued and assembly articular cartilage are also useful for treating sports related joint problems, articular cartilage are also useful for treating sports related joint problems, articular expresence and arthritis proposally and proposally and proposally and propo 유디 New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO1114 PRO4978, useful in molecular biology, chromosome and gene mapping, generating antisense RNA and DNA, and in gene therapy. invention relates to isolated human PRO polypeptides Claim 2; Fig 375; 638pp; English.

(1) is useful for stimulating the release of TNF-alpha from human blood, for modulating the uptake of glucose or FRA by skeletal muscle cells or adipocyte cells, for stimulating the proliferation of udifferentiation of chondrocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of Theorem and in pericyte stimulating the proliferation of Thy for stimulating the proliferation of Thyphocyte cells, for stimulating the release of a cytokine from PBMC cells, for inhibiting the binding of A-peptide to factor VITA, for inhibiting the differentiation of adipocyte cells, for stimulating proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, prostate, rectal, cervical or liver tumour. The oligonucleotide probes

ö
are useful for isolating genomic and cDNA nuclectide sequences or antisense probes. (I) is also useful as therapeutic agent. PRO is useful in assays to identify other proteins or molecules involved in binding interaction. A polymuclectide (II) encoding (I) is useful in chromosome and gene mapping, in generation of antisense RNA and DNA, in the preparation of PRO polypeptide, for generating transgenic animals or knockout animals which in turn are useful in the development and screening of therapeutically useful reagents, in gene therapy, for chromosome identification, as chromosome marker, and for generating probes. An anti-(I)-antibody is useful in diagnostic assays for PRO, e.g. detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. (I) and (II) are useful for tissue typing. This sequence encodes a novel human secreted and transmembrane PRO polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180

2003-844453/78. WPI; 2003-844453/ P-PSDB; ADC69612 New isolated, secreted and transmembrane PRO polypeptides and nucleic acids, useful for the diagnosis, prevention and/or treatment of tumors, such as lung, colon, breast, prostate, rectal, cervical and/or liver tumors.

Claim 2; Fig 375; 637pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TMF-alpha) from human blood, a method for stimulating the prosider to detecting the presence of a tumour in a mammal (e.g. adream). Humsy, cervical and liver tumours). The prolymucleotides are useful in molecular biology, including uses as hypridisation probes, in chromosome and gene mapping, in generating an increames RNA and BNA and in gene therapy. The polymucleotides may also a trisense RNA and BNA and in gene therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapoutically properties or antibodies are used in preparing a tumours, for stimulating of the proliferation of condition responsive to the polypeptides or antibodies are used in preparing of thuman microvascular endothelial cells, for modulating the uptake of glucose or FFA by skeletal muscle cells, for stimulating differentiation of adpocyte cells, for stimulating cells or T-lymphocyte cells, for timulating differentiation of alphocyte cells, for stimulating carbains of inner ear utricular supporting cells, for T-lymphocyte cells, for inducing endothelial cell tube formation and for treating various mammalian hasmoglobin-associated disorders such as various thalassaemias and condition. Note: The sequence encodes a human PRO polypeptide of the invention. Note: The sequence encodes a human PRO polypeptide of the invention. On the property of the USPTO website at sequence encodes a human PRO polypeptide of the invention. %\$CCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCC

Baker KP, Beresini M, Deforge L, Desnoyers L, Filvaroff E, Gao W; Gerritsen ME, Goddard A, Godowski PJ, Gurney AL, Sherwood S; Smith V, Stewart TA, Tumas D, Watanabe CK, Wood WI, Zhang Z;

WPI; 2003-844455/78. P-PSDB; ADC48501. New secreted and transmembrane PRO nucleic acids and polypeptides, useful for detecting a tumor, stimulating the release of tumor necrosis factor alpha and stimulating the proliferation of endothelial cells.

Claim 2; Fig 375; 637pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adremal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses a prisense RNA and bnA and in gene therapy. The polymucleotides may also antisense RNA and bnA and in gene therapy. The polymucleotides may also consider in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening or knock-out animals which are useful as tumours, for stimulating or inhibiting proliferation of thuman microvascular endothelial cells, for modulating the uptake of glucose or PRA by skeletal muscle cells, for modulating the uptake of stimulating differantiation of inner ear utricular supporting one of or gene expression in pericyte cells, for stimulating the proliferation of inner ear utricular supporting cells or T-lymphocyte cells, for modulating the uptake of stimulating endothelial cells to trating various mammals and contitions which criticals are useful for treating various mammals and condition. The sequence represents a human PRO plymucleotide of the invention. For midulation of sequence represents a human PRO plymucleotide of the invention. The sequence represents a human PRO plymucleotide of the invention. The sequence represents a purport sequence represents a pu

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TRP-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidhey, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as an interacting properties of polymedisation probes, in chromosome and gene mapping, in generating an expensive prolypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are cuseful in the development and screening of therapeutically useful respensive to the polypeptides or antibodies are used in preparing a medicament for treating acreening of therapeutically useful responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of antibodies, such as tumours, for stimulating and inhibiting proliferation of confirmance cells, for stimulating the uptake of glucose or PRA by skeateal muscle cells, for stimulating cells, for inducing endothelial cells, for modulating the uptake of confirmation of anglocyte cells, for stimulating cells, for inducing endothelial cells, for stimulating cells or T-lymphocyte cells, for inducing endothelial cells, for stimulating cells or transmission of arthritis and returning cells or transmission are and/or cartilage disorders such as sports injuries and arthritis and propertides are also useful for treating sports-related joint problems, arthritis promoted disorders such as various humane and and prove cells, for enthalphared loss of polypeptides are also useful for treating sports-related joint problems, acquance represents a human prolypolyment is allow availabl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120

The invention describes an isolated PRO (secreted and transmembrane)

CD polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are

C useful for atimulating the proliferation of or gene expression in

CC sells. PRO357, PRO229, PRO1272 or PRO4405 polypeptide are useful

CC for stimulating the proliferation or differentiation of chondrocyte

CC ells. PRO357, PRO355, PRO155, PRO1105 or PRO1419 polypeptide

are useful for stimulating the release of tumour necrosis factor (INF)-

alpha from human blood. PRO982, PRO157, PRO125, PRO11080,

inhibiting the proliferation of normal human dermal fibroblast cells. PRO polypeptides such as PRO6004, PRO4981, PRO7174, PRO5778, PRO4332, etc., are useful for detecting the presence of tumour in a mammal which involves comparing the level of expression of the above PRO polypeptides in a test sample of cells taken from the mammal, and a control sample of normal cells of the same cell type, where a higher level of expression of the PRO polypeptides in the test sample as compared to the control sample is indicative of the presence of tumour in the mammal. The tumour is lung tumour, colon tumour, breast tumour, prestate tumour, rectal tumour or liver tumour. (I) is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polymolectide (II) encoding (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful cor generating transgenic animals or knock-out animals which are useful screening useful reagents. PRO357, PRO229, PRO1272 or PRO4405 polypeptide sport injuries). This sequence encodes a human secreted and transmembrane below.

New PRO nucleic acid, useful for manufacturing a medicament for diagnosing or treating tumor.

Claim 2; Fig 375; 637pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the problitication or differentiation of chondrocyte cells and a method for colon, breast, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The cells in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or antibodies are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or antibodies are useful for medicament for treating a condition responsive to the polypeptides or antibodies or projected or stimulating projiferation of stimulating and inhibiting the uptake of glucose or FFA (free fatty acid) by skeletal muscle cells, for stimulating the proliferation of inner are utricular supporting cells or stimulating proliferation of inner are utricular supporting cells, for traating various bone and/or cartilage disorders such as sports injuries and arthritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating various thalassaemias mammalian haemoglobin-associated disorders such as various thalassaemias

Comparation cascribes an isolated RPO (secreted and transmenderate)

Comparation cascribes an isolated RPO (secreted and transmenderate)

Comparation cascribes an isolated RPO (secreted and transmenderate)

Comparation cascribes an isolated RPO or gene expression in comparation comparation of chondrocyte cells. PRO257, PRO225, PRO1305 or PRO1419 polypeptide are useful for stimulating the release of tumour necrosis factor (TNF).

Comparation Exposor, PRO357, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120

Gerritgen ME, Goddard A, Godowski PJ, Gurney AL, Sherwood S; Smith V, Stewart TA, Tumas D, Watanabe CK, Wood WI, Zhang Z; WPI, 2003-801168/75.
P-PSDB; ADC80561.
New isolated nucleic acid encoding a PRO polypeptide, e.g. PR01114 or PR04978, useful in molecular biology, chromosome and gene mapping, in generating antisense RNA and IN gene therapy.

Claim 2; Fig 375; 637pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for proliferation presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The prolymucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating colon, breast, proceed in chromosome and gene mapping, in generating shybridisation probes, in chromosome and gene mapping, in generating or colon, breast, procedular proportides by recombinant techniques and in genetating either transgenic animals or knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening or knock-out animals which are useful in the development and screening or knock-out animals which are useful in the development and screening or knock-out animals which are useful in the development and screening or antibodies such as tumours, for stimulating and inhibiting proliferation of multiple and inhibiting the uptake of glucose or FRA (free fatty acid) by skeletal muscle cells for stimulating differentiation of adipocyte cells, for stimulating differentiation of angene supression in pericyte cells, for stimulating differentiation of adipocyte cells, for inducing endothelial cell tube formation and for trating various bone and/or cartilage disorders such as sports injuries and arthritis. PRO polypeptides which stimulate the release of problems, articular cartilage are also useful for treating sports related joint infiltration. This sequence are useful for treating sports and condition which may benefit from enhanced

proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The projouncleotides are useful in molecular biology, including uses as colon, brises RNA and in gene therapy. The polymucleotides may also antisense RNA and in gene therapy. The polymucleotides may also consistent in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are used in the PRO polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of the proliferation of of inner earling or modulating the uptake of glucose or FRA by skeletal muscle cells, for modulating the uptake of stimulating differentian of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells or T-lymphocyte cells, for inducing endothelial cell tube formation and for treating or arthritis pro polypeptides which stimulate the release of proceoglycans from cartilage are useful for treating sports-related joint problems, criminar cartilage are useful for treating various mammalian haemoglobince associated disorders such as various thalassaemias and conditions which associated disorders such as various thalassaemias and conditions. The sequence data for this patent is also available in electronic format criminal conditions which associated data for this patent is also available in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  480

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the

The invention relates to an isolated mucleic acid encoding a secreted and transmembrane polypeptide (PRO). The nucleic acid, a polypeptide encoded by the nucleic acid, or an agonist or antagonist, is used to treat a cardiovascular, endothelial, or angiogenic disorder in a mammal, preferably a human. The human may have suffered a myocardial infarction or has cardiac hypertrophy, trauma, a cancer, or age-related macular degeneration. The cardiac hypertrophy is characterised by the presence of an elevated level of PGF-2 alpha. A PRO polypeptide, given in the specification, or an agonist is used to inhibit or stimulate endothelial cell growth in a mammal. PRO21 or an agonist is used to induce cardiac hypertrophy. PRO1376 or PRO149 is used to stimulate angiogenesis. PRO4302 or an agonist is used to induce endothelial cell apoptosis. A PRO polypeptide, given in the specification, or an agonist is used to crimilate or inhibit smooth muscle cell growth, or to induce endothelial cell tube formation. The present sequence represents a cDNA encoding a PRO polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated nucleic acid encoding a secreted and transmembrane polypeptide for treating a cardiovascular, endothelial, or angiogenic disorder in a mammal, such as cancer or age-related macular degeneration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Stephan JF;

New secreted and transmembrane PRO polypeptides and nucleic acids useful for detecting a tumor, stimulating the release of proteoglycans from cartilage and stimulating the proliferation of endothelial cells.

Claim 2; Fig 375; 637pp; English

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the colypeptide, a method for stimulating the polypeptide, a method for stimulating the polypeptide (TWF-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses a hybridisation probes, in chromosome and gene mapping, in generating cartisense RNA and in gene therapy. The polymucleotides may also cartisense RNA and in gene therapy. The polymucleotides may also cartisense RNA and in gene therapy. The polymucleotides may also cartisense RNA and in gene therapy. The polymucleotides may also careful in molecular and screening or knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of therapeutically useful casgents. The RNO polymeptides or antibodies are used in preparing a cumours, for stimulating and inhibiting proliferation of madicament for treating a condition responsive to the polymeptides or T-lymphocyte colls, for modilating the uptake of stimulating differantiation of adipocyte cells, for stimulating colls or T-lymphocyte cells, for stimulating colls or T-lymphocyte cells, for stimulating differantiation of adipocyte cells, for stimulating colls are useful for treating retributes and conditions and conditions which cartilage are useful for treating various mammalian hemoglobin-cartinage defects, osteoarthritis and rheumatoid arthritis. PRO polymeptides are useful for treating various mammalian hemoglobin-cartinage defects, osteoarthritis and rheumatoid arthritis. Common enhanced local immune systeme cells in proteoglycans columner arthritis a human PRO polymucleotide of the invention. The s

The invention describes an isolated PRO (secreted and transmembrane) polygeptide (1). PRO982, PRO1160, PRO1187 or PRO1329 polygeptide are useful for stimulating the proliferation of or gene expression in pericyte cells. PRO357, PRO229, PRO1272 or PRO4405 polypeptide are useful for stimulating the proliferation or differentiation of chondrocyte cells. PRO231, PRO357, PRO1155, PRO1155, PRO1150 or PRO1419 polypeptide are useful for stimulating the release of tumour necrosis factor (TNF)-

hundred and twenty two nucleic acids encoding PRO polypeptides, tul in gene therapy, or for preparing a medicament for treating a lition that is responsive to the PRO polypeptide or anti-PRO antibody,

useful in gene therapy, or fo condition that is responsive

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the proliferation of differentiation of chondrocyte cells and a method for proliferation or differentiation of chondrocyte cells and a method for colon, breast, prostate, rectal, kidney, cervical and liver tumours). The proliferation probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of human microvascular endothelial cells, for modulating the uptake of

glucose or FFA (free fatty acid) by skeletal muscle cells or adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating proliferation of or gene expression in pericyte cells, for terminating the proliferation of inner ear utricular supporting cells or remindating the proliferation of inner ear utricular supporting cells or treating various bone and/or cartilage disorders such as sports injuries and arthritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating sports-related joint problems, articular cartilage defects, osteoarthritis and rheumatoid carthritis. PRO polypeptides are also useful for treating various mammalian haemoglobin-associated disorders such as various thalassaemias and conditions which may benefit from enhanced local immune system cell infiltration. This sequence represents a human PRO polymucleotide of the invention. Note: The sequence date for this patent is also available in electronic format from USPTO at seqdata.uspto.gov/sequence.html.

Stephan JF;

The invention relates to an isolated mucleic acid encoding a secreted and transmembrane polypeptide (PRO). The nucleic acid, a polypeptide encoded by the nucleic acid, or an agonist or antagonist, is used to treat a cardiovascular, endothelial, or angiogenic disorder in a mammal, preferably a human. The human may have suffered a myocardial infarction or has cardiac hypertrophy, trauma, a cancer, or age-related macular companies of degeneration. The cardiac hypertrophy is characterised by the presence of an elevated level of PGF-2 alpha. A PRO polypeptide, given in the specification, or an agonist is used to inhibit or stimulate endothelial companies of the presence of the presence of the presence of the propertrophy. PRO1376 or PRO149 is used to stimulate angiogenesis. PRO1302 or an agonist is used to induce cardiac hypertrophy. PRO1376 or PRO149 is used to stimulate angiogenesis. PRO1979 given in the specification, or an agonist is used to stimulate or inhibit smooth muscle cell growth, or to induce endothelial continue or inhibit smooth muscle cell growth, or to induce endothelial continue which the properties of the intersection of the properties of the properties of the intersection of the properties of the properties

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human bloed, a method for stimulating the presence of a tumour in a memmal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating colon, breast problems and in gene therapy. The polymucleotides may also a setul in the development and screening of knock-out animals which are cuseful in the development and screening of knock-out animals which are useful in the development and screening of the properties or antibodies are used in preparing a condition responsive to the polypeptides or antibodies are used in preparing a condition responsive to the polypeptides or antibodies are used in himbiting proliferation of human microvascular endothelial cells, for modulating the uptake of simulating differentiation of angles expression in pericyte cells, for stimulating differentiation of since expression in pericyte cells, for stimulating differentiation of since are utricular supporting cells or T-lymphocyte cells, for inducing endothalial cells or adipocyte cells, for modulating the proliferation of since are utricular supporting cells or T-lymphocyte cells, for methating endothalial cell tube formation and for treating cells or treating entries and cartilage are useful for treating various mammalian hasmoglobin-associated disorders such as various thalassaemias and condition. Note: sequence tepresents a human PRO polymucleotide the invention. Note: the sequence response of the invention of the mil 85888888888888888888888888888888888888

The invention describes an isolated PRO (secreted and transmembrane)

polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are
useful for stimulating the proliferation of or gene expression in

periovic cells. PRO357, PRO229, PRO1272 or PRO4405 polypeptide are useful

for stimulating the proliferation or differentiation of chondrocyte

cells. PRO357, PRO355, PRO1155, PRO1156 or PRO449 polypeptide

cells. PRO317, PRO357, PRO1255, PRO1156, PRO1419 polypeptide

alpha from human blood. PRO982, PRO357, PRO725, PRO1419, PRO1419,

us-10-017-084a-522.rng

involves comparing the level of expression of the above PRO polypeptides in a test sample of cells taken from the mammal, and a control sample of normal cells of the same cell type, where a higher level of expression of the PRO polypeptides in the test sample as compared to the control sample is indicative of the presence of tumour in the mammal. The tumour is luminarized to the control sample tumour, colon tumour, breast tumour, prostate tumour, rectal tumour of liver tumour. (I) is useful as molecular weight markers, for tissue typing, or as therapeutic as melecular expective (II) encoding (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful for generating transgenic animals or knock-out animals which are useful screening useful reagents. PRO357, PRO229, PRO1272 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, prot injuries). This sequence encodes a human secreted and transmembrane 88888888888888888888

(GETH) GENENTECH INC.

Baker XP, Beresini M, Deforge L, Desnoyers L, Filvaroff E, Gao W; Gerritsen ME, Goddard A, Godowski PJ, Gurney AL, Sherwood S; Smith V, Stewart TA, Tumas D, Watanabe CK, Wood WI, Zhang Z;

WPI; 2003-875645/81. P-PSDB; ADD41191. New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO1114 or PRO4978, useful in molecular biology, chromosome and gene mapping, in generating antisense RNA and DNA, and in gene therapy.

Claim 2; SEQ ID NO 375; 637pp; English.

The invention describes 105 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (1). (1) is useful for stimulating the release of TMF-alpha from human blood, for modulating the uptake of glucose or FPA by skeletal muscle cells or adipocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating proliferation of T-lymphocyte cells, for stimulating proliferation of adipocyte cells, for stimulating proliferation of endothelial cells, for stimulating cells, for inhibiting the binding of A-peptide to factor VINTA, for inhibiting the binding of the presence of tumour in a mammal. The tumour is lung, colon, breast, the presence of tumour in a mammal. The tumour is lung, colon, breast, cells, for stimulating prodefice of a liver timour. The oligonouclectide probes are useful for isolating genomic and CDNA nucleotide sequences or antisense probes. (1) is also useful as therapeutic agent. PRO is useful in a service or for propagation of PRO purpopende, for generating transgenic animals or correction. A polymorlectide (II) encoding (I) is useful in chromosome and gene mapping, in generation of antisense RNA and DNA, in the correction of PRO purpopende, for generating transgenic animals or correction of corrections or serum, and for generating of therapeutically useful reagents, in gene therapy, for chromosome identification, as chromosome marker, and for generating correcting its expression in specific cells, itssues or serum, and for anovel human secreted and transmembrane PRO polypeptide.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymuclectides encoding them. The invention also relates to an antibody which specifically binds to a FRO polypeptide, a method for stimulating the invention also relates to an antibody which specifically binds to a FRO polypeptide, a method for stimulating the presence of a tumour in a mammal (e.g. adrenal, lung, corporate, related, kidney, cervical and invention and presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymuclectides may also hypridisation probes, in chromosome and gene mapping, in generating antisense KNA and DNA and in gene therapy. The polymuclectides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful useful in the development and screening of therapeutically useful useful in the development and screening of therapeutically useful useful in the development and screening of therapeutically useful useful in the development and screening of therapeutically useful useful in the development and screening of therapeutically useful useful antibodies, such as tumours, for stimulating and inhibiting proliferation of finner endition responsive to the polypeptides or antibodies are useful muscle cells, for stimulating differentiation of adipocyte cells, for stimulating adipocyte cells, for stimulating adipocyte cells, for stimulating and relating various bene and/or cartilage disorders such as sports injunated and continues and continues and cartilage defects, osteoarthities and rheumatoid architage are useful for treating sports-related joint problems, associated disorders such as various thalassaemias and conditions which castlings are also useful for treating various and conditions which are supported to the property of sequence encodes a human PRO polypepti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are useful for stimulating the proliferation of or gene expression in pericyte cells. PRO357, PRO229, PRO1272 or PRO4405 polypeptide are us for stimulating the proliferation or differentiation of chondrocyte

Claim 2; Fig 375; 638pp; English

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the polypeptide, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for proliferation or differentiation of chondrocyte cells and a method for proliferation or differentiation of chondrocyte cells and a method for constant and a method for stimulating the proliferation probes, in chromosome and gene mapping, in generating collon, brass, prostate, rectal, kidney, cervical and liver tumours). The colymucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating collons, present and second in gene therapy. The polymucleotides may also consisted in preparing PRO polypeptides by recombinant techniques and in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development of screening of knock-out animals which are useful in the development of screening of the modition of collission and screening of the modition of the modition of the modition of screening and inhibiting proliferation of human microvascular endothelial cells, for modilating the uptake of stimulating differantiation of since expression in pericyte cells, for stimulating colliferation of since are utricular such as sports injuries and arthritis. PRO polypeptides which stimulate the relates of proceedyrans (colls, for inducing endothelial cell tube formation and for treating college are useful for treating sports related joint problems. The proliferation of inner articular cartilage defects, osteoarthitis and rheumatoid arthritis. PRO polypeptides which stimulates are second and sorders such as various human encodes a human PRO polypeptide or a suggement of the USPTO website at sequence encodes a human

```
The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (1). (1) is useful for stimulating the transmembrane) polypeptides (1). (1) is useful for stimulating the acids are dipocyte calls, for stimulating the proliferation or differentiation of chordrocyte calls, for stimulating the proliferation or differentiation of chordrocyte calls, for stimulating the proliferation of proceoglycans from cartiage, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of for a cartiacular supporting cells, for stimulating the proliferation of T-1ymphocyte cells, for stimulating the proliferation of T-1ymphocyte cells, for stimulating conception of adoptory to the release of a cytokine from PBMC cells, for inhibiting the binding of cells, for stimulating proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, prostate, rectal, cervical or liver tumour. The oligonucleotide probes are useful for isolating genomic and cDMA uncleotide sequences or antisense probes. (1) is also useful as therapeutic agent. PRO is useful

in assays to identify other proteins or molecules involved in binding interaction. A polynucleotide (II) encoding (I) is useful in chromosome and game mapping, in generation of antisense RNA and DNA, in the preparation of FNC polypeptide, for generating transgenic animals or knockout animals which in turn are useful in the development and carcening of therapeutically useful reagents, in gene therapy, for chromosome identification, as chromosome marker, and for generating probes. An anti-(I)-antibody is useful in diagnostic assays for FNC, e.g. detecting its expression in specific cells, tissues or serum, and for affinity purification of PNC from recombinant cell culture or natural sources. (I) and (II) are useful for tissue typing. This sequence encodes a novel human secreted and transmembrane PNC polypeptide. ö 300 540 540 099 720 720 120 180 180 240 240 300 360 360 420 420 480 480 600 600 099 780 60 9 GGTTGGCTTTGTGAGTGAAGACGAATACTTGGAAATTCAGGGCATCACCCGGGAGCAGTC 1 GTTGTGTCCTTCAGCAAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGAGCAACAC 121 AAGAAAAAAATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTTTGGGCAAT CACCTTCCCCAAAGCTATGGACAACGTGACGGGCAGAGGGGGCGCCACCTCAG GTGCACTATTGACAAACCGGGTCACCCGGGTGGCCTGGCTAAACCGCAGCACCATCCTCTA 361 TGCTGGGAATGACAAGTGGTGCCTGGATCCTCGCGTGCTCCTTCTGAGCAACACCCCAAAC GCAGTACAGCATCGAGATCCCAGAACGTGGATGTGTATATGACGAGGGCCCCTTACACCTGCTC 481 GGTGCAGACAGACCACCCAAAGACCTCTAGGGTCCACTCATTGTGCAAGTATCTCC CAAAATTGTAGAGATTTCTTCAGATATCTCCATTAATGAAGGGAACAATATTAGCCTCAC CTGCATAGCAACTGGTAGACCAGAGCCTACGGTTACTTGGAGACACATCTCTCCCAAAGC GGTTGGCTTTGTGAGTGAAGACGAATACTTGGAAATTCAGGGCATCACCCGGGAGCAGTC **AGGGGACTACGAGTGCAGTGCCTCCAATGACGTGGCCGCGCCCGTGGTACGGAGAGTAAA** GGTCACCGTGAACTATCCACCATACATTTCAGAAGCCAAGGGTACAGGTGTCCCCGTGGG 1 GITGIGICCTICAGCAAACAGIGGATTIAAAICTCCTIGCACAAGCTIGAGAGCAACAC 61 AATCTATCAGGAAAGAAAGAAAAAAAACCGAACCTGACAAAAAAAGAAAAAAGAAG 121 AAGAAAAAATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTCTTGGGCAAT CTTCACGGGGCTGCTGTCTCTCTTCCAAGGAGTGCCCGGTGCGCAGCGGAGATGC GTGCACTATTGACAACCGGGTCACCCGGGTGGCCTGGCTAAACCGCAGCACCATCTTA TGCTGGGAATGACAAGTGGTGCCTGGATCCTCGCGTGGTCCTTCTGAGCAACACCCAAAC GCAGTACAGCATCGAGATCCAGAACGTGGATGTGTATGACGAGGGCCCTTACACCTGCTC GGTGCAGACAGACCACCCCAAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATCTCC CTGCATAGCAACTGGTAGACCAGAGCCTACGGTTACTTGGAGACACATCTCTCCCAAAGC Gaps 0; Query Match

WPI; 2003-829354/77. P-PSDB; ADD37098. New isolated nucleic acids encoding a secreted and transmembrane polypeptide for treating a cardiovascular, endothelial, or angiogenic disorder in a mammal, such as cancer or age-related macular degeneration.

Claim 2; SEQ ID NO 55; 492pp; English.

The invention relates to an isolated nucleic acid encoding a secreted and transmembrane polypeptide (PRO). The nucleic acid, a polypeptide encoded by the nucleic acid, or an agonist or antagonist, is used to treat a cardiovascular, endothelial, or anagonist, is used to treat a cardiovascular, endothelial, or anagoiogenic disorder in a mammal, preferably a human. The human may have suffered a myocardial infarction or has cardiac hypertrophy, trauma, a cancer, or age-related macular of degeneration. The cardiac hypertrophy is characterised by the presence of an elevated level of PGF-2 alpha. A PRO polypeptide, given in the specification, or an agonist is used to inhibit or stimulate endothelial complexity. PRO1376 or PRO1499 is used to inhibit or stimulate endothelial probably. PRO1376 or PRO1499 is used to stimulate angiogenesis. PRO4302 or an agonist is used to induce cardiac propertied, given in the specification, or an agonist is used to call growth in the specification, or an agonist is used to stimulate or inhibit smooth muscle cell growth, or to induce endothelial cell tube formation. The present sequence represents a cDNA encoding a PRO polypeptide of the invention.

Human; gene; 88; PRO; secreted polypeptide; transmembrane polypeptide; tumnour necrosis factor-alpha; TNF-alpha; chondrocyte cell; tumnour; cancer; adrenal; lung; colon; breast; prostate; rectum; kidney; cervix; liver; microvascular endothelial cell; glucose; FFA; skeletal muscle cell; adipocyte cell; periorte cell; periorte cell; inner ear utricular supporting cell; prostoyte cell; endothelial cell tube formation; bone disorder; cartilage disorder; esporte injury; proteoglycan; articular cartilage defect; osteoarthritis; rheumatoid arthritis; haemoglobin-associated disorder thalassaemia; immune system cell infiltration. The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis 3 Gao New secreted and transmembrane PRO nucleic acids and polypeptides, for detecting the presence of a tumor, stimulating the release of t necrosis factor alpha from human blood and treating, e.g. organ fai . cc factor-alpha (TRF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, Kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as antisense RNA and DNA and in gene therapy. The polymucleotides may also antisense RNA and DNA and in gene therapy. The polymucleotides may also generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful creagents. The RNO polympetides or antibodies are used in preparing a condition responsive to the polymestal or medicament for treating a condition responsive to the polymestal or antibodies, such as tumours, for stimulating and inhibiting proliferation of human microvascular endothelial cells, for modulating proliferation of or gene expression in perforte cells, for stimulating conditions of or gene expression in perforte cells, for stimulating the proliferation of inner ear utricular supporting cells or T-lymphocyte cells, for inducing endothelial cells as sports endision and for treating cartilage and modor cartilage disorders such as sports injuries and articular cartilage defects, osteoarthritis and rheumatoid arthritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating sports-related joint problems, articular cartilage defects, osteoarthritis and rheumatoid arthritis. PRO polypeptides which stimulate cells infiltration. Note: The associated disorders such as various thalassaemias and conditions which may benefit from enhanced local immune system cell infiltration. Note: The high of the invention. Note: The high of the invention and conditions which have not the man and an endal conditions and the interference fate and the man endal conditions are not conditions and conditions which the articular cartilage are also useful for associate the USPTO website at segdata.uspto.gov. 888888888888888888888888888888888888

                                                                                                                                                                                    15-JAN-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          30-OCT-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Baker KP,
A ADD 2578 A ADD 2578
```

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for proliferation or differentiation of chondrocyte cells and a method for offerenting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and in gene therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or antibodies are used in preparing a mediament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of human microvascular endothelial cells, for modulating the uptake of New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO1114 PRO4978, useful in molecular biology, chromosome and gene mapping, generating antisense RNA and DNA, and in gene therapy. Claim 2; Fig 375; 637pp; English

```
stimulating differentiation of adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating to proliferation of or gene expression in pericyte cells, for stimulating to the proliferation of or gene expression in pericyte cells, for stimulating c the proliferation of inner ear utricular supporting cells or T-lymphocyte cells, for inducing endothelial cell tube formation and for treating cells, for inducing endothelial cell tube formation and for treating cartilage and/or cartilage disorders such as sports injuries and cartilage are useful for treating sports-related joint problems, contribute cartilage defects, osteoarthritis and rheumandidan haemoglobin-carticular cartilage defects, osteoarthritis and rheumandidan haemoglobin-complyeptides are also useful for treating various mammalian haemoglobin-cassociated disorders such as various thalassaemias and conditions which complements a human PRO polymoclectide of the invention. This sequence data for this patent is also available in electronic format from USPTO at seqdata.uspto.gov/sequence.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  600
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                600
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 660
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 480
